W.S.23. **Photosynthesis.** Name .....

Animals feed on plants or other animals but most plants make their own food by using light energy and simple chemicals. This process is called PHOTOSYNTHESIS. Water and carbon dioxide molecules are joined together to make GLUCOSE sugar and waste oxygen gas. This happens in the leaf cells inside tiny discs called CHLOROPLASTS. The chloroplasts contain a green chemical called CHLOROPHYLL which absorbs light energy. The diagram below shows this process.

The glucose sugar that is made may be changed into other useful chemicals for growth or storage. The plant also uses glucose as a fuel in RESPIRATION to release energy when it is needed in the cells. Respiration is the opposite process of photosynthesis :

FOOD + OXYGEN ⟹ CARBON DIOXIDE + WATER + ENERGY

Exercise - Complete the sentences below.

1) Animals can not make their own F _ _ _

2) Plants use L _ _ _ _ energy to help them make their food.

3) Photosynthesis happens in the L _ _ _ cells.

4) The gas needed for photosynthesis is C _ _ _ _ _ D _ _ _ _ _ _

5) C _ _ _ _ _ _ _ _ _ _ _ is the green chemical that absorbs light energy.

6) The opposite reaction to photosynthesis is R _ _ _ _ _ _ _ _ _ _ _

7) Plants give animals food and O _ _ _ _ _
