Year 8 Science – Biology

Cells, Tissues and Organs

1. Use your textbook and the words from the Word Bank below to fill in the paragraphs about cells, tissues and organs.

_____ are the basic building blocks of _____. However, in _____ organisms, like humans, _____ all cells look the same. Cells are _____ to carry out specific tasks. For example, muscle cells have more _____ than other cells so that they can provide more energy.

Groups of similar cells that carry out the _____ job are called _____. For example, many muscle cells are _____ together to form muscle tissue.

_____ are made of _____ kinds of tissue, but they work together to do the same job. For example, the stomach is made of muscle and other types of tissues that work _____ to grind food.

Many organs working together are called _____, such as the _____ system.

Word Bank

Specialised	Cells	Mitochondria
Tissues	Multicellular	Systems
Different	Same	Not
Bundled	Digestive	Life
Organs	Together	

2. Use your textbook or laptop to label the following organs of the body.
