Label the cell below
Draw a clearly labelled diagram below of your biscuit cell.

Organelle	Represented by	What it's role/function is in a real cell
Nucleus		
Ribosomes		
Chloroplasts		
Cell Wall		
Rough ER		
Smooth ER		
Lysosomes		
Golgi Bodies		
Mitochondria		

1 Plant and animal cells have a number of different parts. **Recall** the job of each by matching the cell part (on the left-hand side) with the job it does (on the right-hand side) by joining them with a line. Two have been done for you.

(a) Cell wall
(b) Cell membrane
(c) Nucleus
(d) Cytoplasm
(e) Vacuole
(f) Mitochondria
(g) Ribosome
(h) Endoplasmic reticulum
(i) Lysosome
(j) Chloroplast

The 'skin' that holds the cell together
A watery, jelly-like mixture that contains many smaller parts where the work of the cell takes place
The powerhouse of the cell where the energy we need is released from the food we eat
The skeleton of a plant
The garbage disposal units that get rid of wastes from the cell
Part of the cell where photosynthesis takes place
Control centre of the cell
Contains wastes or chemicals that are being moved around the cell
Microscopic factories that produce the proteins we use to grow and repair our bodies
Pathways that allow materials to move quickly and easily through the cell
