

Rock Cycle

Add more information to these sentences to make them more informative. Include information such as, where, when, what and descriptive words.

1. The Earth's rocks are changed.

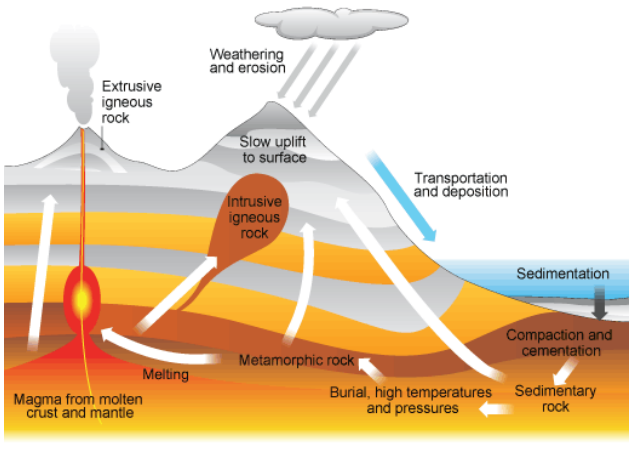

2. Magma rises to the surface and becomes igneous rocks.

3. These igneous rocks form sediments, which form sedimentary rocks.

4. As layers build up the bottom layers sink into the Earth's crust.

When this happens they can be changed into metamorphic rocks.

5. They may melt to produce magma.

6. They may be uplifted by forces pushing the rocks upwards.

7. The Earth is being worn down and uplifted by mountain-building forces.

As this happens the rocks are changed from one form to another.

The whole process is called the *rock cycle*.
