Reliable

Reliable results are when you get almost the same results every time you repeat your experiment. You should always repeat your experiment to make sure your results are reliable.

☞ Josh and Brenda were both investigating how long it took for 5g of sugar to dissolve in 50ml of warm water. They have recorded their results below.

Josh's results

Experiment	1	2	3	Total	Average time taken
Time taken (seconds)	46	56	57	159	53

Brenda's results

Experiment	1	2	3	Total	Average time taken
Time taken (seconds)	57	56	57	170	56.6

☞ Study both Josh and Brenda's results. Whose results do you think are the most reliable? Why?
