# For Dissection Non-participants

**Part One:**

Using your labelled diagrams to help you:

- Imagine you are a red blood cell.
- Explain your journey through the circulatory system, starting and finishing in the right atrium and delivering oxygen to the brain on your way.
- Make sure to name all the important veins, arteries, atria and ventricles etc. that you will come into contact with during your journey.

**Part Two:**

Answer the following questions.

- How do red blood cells differ to white blood cells in their structure and function?
- What are two functions of blood?
- Fill in the missing words in the paragraph below:

  From the body, _____ blood returns to the heart through the _____ _____ to the _____ atrium. The blood is then pumped out of the heart through the _____ artery to the _____ .

  Oxygenated blood from the lungs returns to the _____ atrium of the heart through the _____ vein. From here it enters the _____ ventricle and leaves the heart through the _____ to go to the body.

- Why is the left ventricle wall much thicker than the right?
