Minerals and Flame Test

One way to identify minerals(or the elements in minerals) is to do flame testing.

Different elements will burn with different coloured flames.

Instructions.

1. Light the Bunsen and put on the blue heating flame.
2. Get one of the pop sticks soaked in a particular liquid.
3. Record the liquid in the table below.
4. Place the pop stick in the flame of the Bunsen.
5. Record the colour that is produced in the table below.
6. Repeat for the other pop sticks.

Results

Liquid	Colour of flame

What was another characteristic used to classify elements and minerals that we looked at last week?

_____

What is the scale called that measures this characteristic?
