Glucose + Oxygen -> Carbon Dioxide + Water + Energy

The part of the body that stops food going down into your lungs

Respiration not involving oxygen

The diaphragm relaxes and moves upwards during____

During inhalation the ribs move up and _____

The acid produced during anaerobic respiration

Gas _____ occurs between the alveoli and capillaries.

The process by which gases move between the alveoli and capillaries

The main purpose of respiration is to provide _____ for all living cells

The volume of the lungs _____ during exhalation

When the diaphragm contracts it moves_____

The process on inhalation and exhalation is called_____

In the lungs _____ diffuses into the capillaries, while _____diffuses into the alveolus
