Weathering (p289-292)

Weathering

1. What does the term weathering mean in geology?

Physical Weathering

1. List five types of physical weathering.
   -
   -
   -
   -
   -

Temperature

1. What happens when solids are heated and cooled?

2. What can happen if the temperature changes quickly between day and night?

3. What can happen once the rock has split?

Ice and water

1. Why can ice widen cracks in rocks?

2. What are glaciers?

3. What happens as glaciers move?

4. Describe how running water can cause weathering.

Salts

1. What are salts? Give an example of a salt.

2. Describe how salts can cause weathering.

Wind

1. Explain how wind causes weathering.

Plants

1. Explain how plant roots can cause weathering.

<u>Chemical Weathering</u>

Gases

1. Which gases in air can react with some types of rock?

2. What do these gases do to the rock?

Acids

1. Explain how acids can cause weathering.

Water

1. Describe how water can cause weathering.

<u>Erosion</u>

1. What is erosion?

2. What are agents of erosion?

3. Describe the difference between erosion and weathering.

4. Where does erosion often occur and why?

Sedimentation

1. What is sedimentation?

2. Where does sedimentation happen?

3. In rivers, where does sedimentation occur the most?
