The Particle Theory of Matter

All MATTER is made up of tiny particles that are constantly moving.

The Particle theory of Matter=

Solids
Particles _____ in fixed position. The bonds holding particles together are very strong

Liquids
Particles _____ over each other. The bonds holding them together are strong.

Gasses
Particles move _____ and _____. The forces holding the particles together are weak.

Matter

Matter is anything that has _____ and takes up _____.

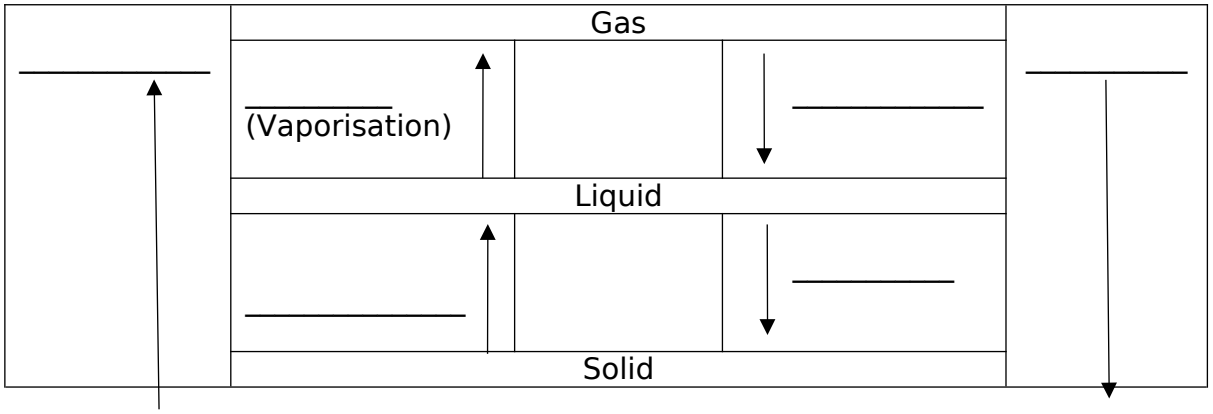

Matter can occur in 3 states _____, _____ and _____.

Matter can change from one state to another.

This is an example of a _____ change. In a _____ change no new substance is made, but the material changes _____ or _____.

There are names for the changes of state. Use the following words to fill in the table below.

Melting, freezing, boiling, condensing and sublimation.

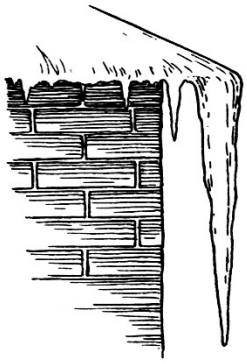

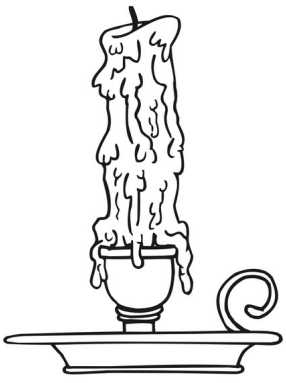

The particles in matter are _____ moving.

The particles in matter are held together with forces called _____.

In solids the _____ are very _____.

In liquids the _____ are _____.

In gasses the _____ are _____.
