The Cell – How it works

1. List some examples of specialised cells and sketch them.

2. What is meant by the term “multi-cellular”?

3. What is the name for the outside of a cell? What is special about it?

4. Name the liquid inside the cell? What is in it?

5. Name as many organelles as you can.

6. What materials have to enter the cell and what would you expect the cell to give out?

7. What would happen if the cell could not move away from its waste?

8. What special features do all cells have?

9. Where are the instructions stored for running the cell?

10. How do these instructions get to the other parts of the cell?

11. What does DNA stand for? What is the shape of the DNA molecule?

12. What does DNA do as the cell reproduces?

13. When do we see chromosomes?

14. How is protein made? List some of the steps.

15. What do ribosomes do?

16. What happens to proteins in the endoplasmic reticulum?
