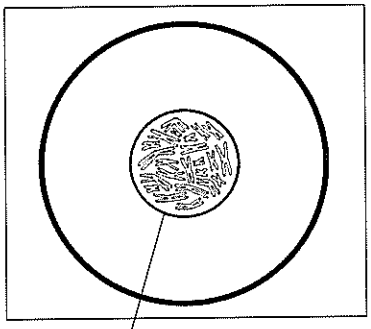
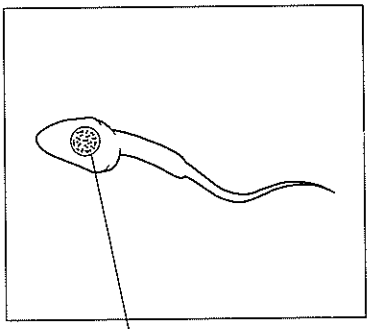
BUT...

An egg cell



nucleus containing **23** chromosomes.

A sperm cell

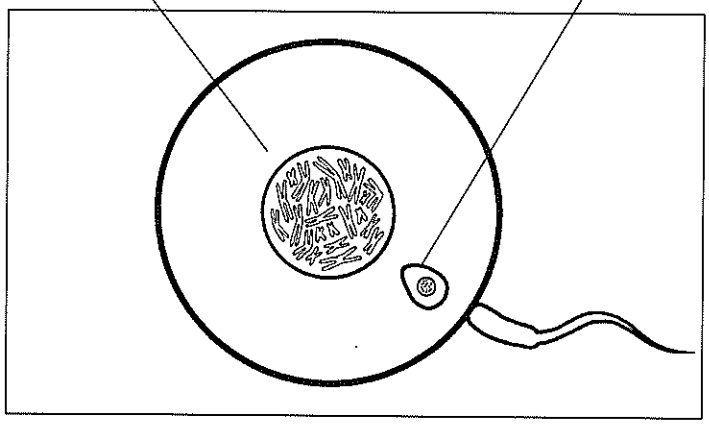


nucleus containing **23** chromosomes.

# INFORMATION SHEET 1

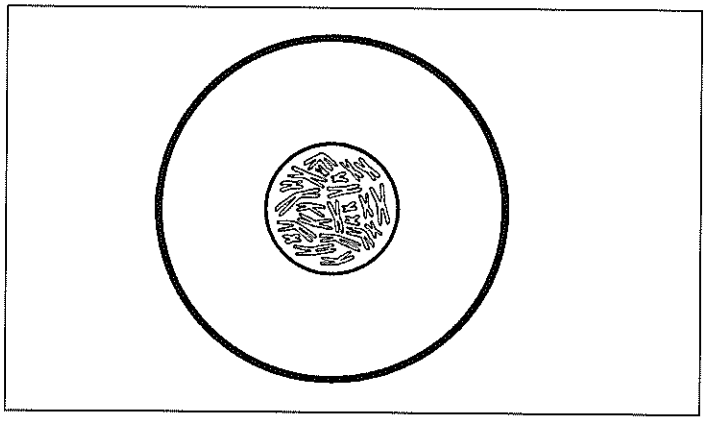
SO...
when fertilisation takes place

An egg cell (containing **23** chromosomes) joins with A sperm cell (containing **23** chromosomes)



to make

a zygote (fertilised egg cell) containing **46** chromosomes



and this is the beginning of a unique new individual.
