CREATE A CREATURE

Within this habitat you need to design an animal with suitable adaptations. Remember you WANT your creature to thrive in its environment and its species to survive.

Your creature has been living in this environment for a long time and has developed ways to cope with its environment.

Your Creatures habitat: **MANGROVE WETLAND**

What you need to hand in –

- Description of its environment in detail (remember this means biotic and abiotic factors!)
- Create an appropriate food web for your area.
- Describe your creatures role in the ecosystem (Predation, Competition, Scavenger etc) Create a **picture** of your creature with **all** adaptations labelled, and include some of the features of the environment.

You need to have a <u>minimum</u> of 10 adaptations **more is better!**

- 4 Structural
- 3 Behavioural
- 2 Functional
- 1 of your choice

Your adaptations must reflect the conditions and its position in the food chain. Remember if your creatures adaptations are inappropriate IT WILL DIE and its species will not survive.

You will need to have an organised list of your adaptations and explain and discuss their use to your creature

For example:

A Hawk is a carnivore and a predator and one of its *structural* adaptations is that it has a hooked sharp strong beak for ripping, tearing and eating its prey.

LIMITATION: your animal is not intelligent (ie cannot use tools)

Your creature must be a <u>NEW</u> creature not a dolphin and shark combined, or a giraffe and a lion combined.

Your creativity mark will reflect your imagination.

BE CREATIVE AND HAVE FUN!
