W.S.60. **Acids and metals.** Name .....

Metals that are more reactive than copper will react with acids to form hydrogen gas and a salt.

ACID + METAL ⟹ HYDROGEN + SALT

The more reactive the metal is, the faster the reaction will be. The experiment below shows the reaction between hydrochloric acid and magnesium.

1) The magnesium reacts with the acid.

2) A solution of magnesium chloride has formed.

3) **Magnesium chloride** salt is left behind.

Exercise - Complete the missing words in the sentences and equations below.

1) A metal must be more reactive than C _ _ _ _ _ to react with an acid.

2) ACID + METAL ⟹ HYDROGEN + _____

3) Reactive metals produce hydrogen F _ _ _ _ _ than unreactive metals.

4) The test for H _ _ _ _ _ _ _ is a lighted splint.

5) Hydrogen is an E _ _ _ _ _ _ _ _ gas.

6) hydrochloric acid + magnesium ⟹ _____ + magnesium chloride

7) All of the A _ _ _ has reacted when there are no more hydrogen bubbles given off.

8) The S _ _ _ that has been made is magnesium chloride.
