W.S.44. Metals and non-metals.

Name .....

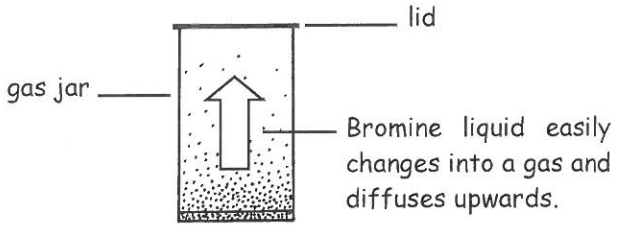

The elements can be divided into two main groups which are METALS and NON-METALS. The table below shows the properties of each group.

Metals	Non-metals
Most are shiny solids at room temperature although mercury is a liquid. They usually have high melting points.	They vary in their properties. They usually have low melting points and many are gases at room temperature.
Good conductors of heat.	Most are poor conductors of heat.
Good conductors of electricity.	Poor conductors of electricity except for graphite which is a form of carbon.
A few are magnetic (iron, cobalt and nickel).	None are magnetic.
They are often flexible (bendy) and can be hammered into shape.	They are often brittle (hard but break easily).

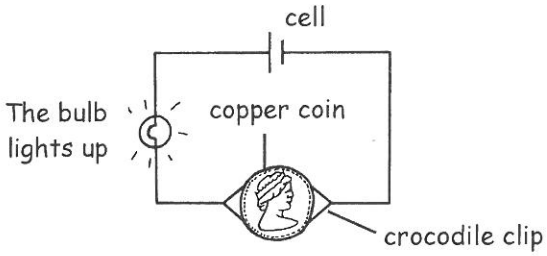

Exercise 1 - For each diagram below write down if the element is a metal or a non-metal.

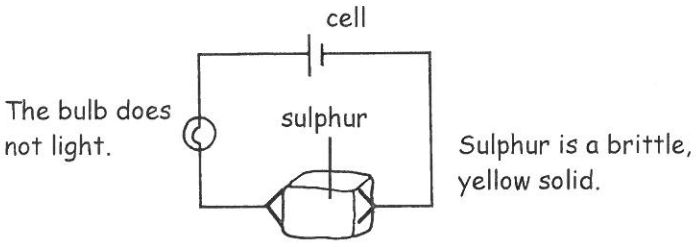

Iron is a _____

Bromine is a _____

Copper is a _____

Sulphur is a _____

Exercise 2 - Complete the sentences below.

1) M _ _ _ _ _ _ is the only metal that is a liquid at room temperature.

2) G _ _ _ _ _ _ _ is the only non-metal that is a good conductor of electricity.

3) The M _ _ _ _ _ _ _ metals are iron, cobalt and nickel.

4) M _ _ _ _ _ can be hammered into shape.
