Name: _____

Class: _____

ACTIVITY SHEET

3.3 Changes in the ecosystem

External factors affect the number of species an environment can accommodate. Below is a graph of two lichen species growing on a fallen log in a temperate forest. Use this information to answer a series of questions.

Questions

1 List the dependent and independent variables.

2 List five factors that could be affecting the lichen species.

3 State what is happening to Species 1 and Species 2 in the graph.

4 Suggest a reason for the decline in percentage coverage of Species 2.

5 Using the data from the graph, convert this information to a table.
