word equation

Unit E Atoms and elements

Glossary

atoms the smallest bit of something

chemical **properties** concerning changes that do involve the formation of a new substance

chemical change a change that involves the formation of a new substance

chemical reaction the process of change from **reactants** to **products**

chlorine a green non-metallic **element** that is a poisonous gas

compound a pure substance made of two or more kinds of **atom** that are chemically joined

elements the simplest substances

molecule a group of **atoms** that are chemically joined together

oxygen a colourless non-metallic **element** that is a gas involved in burning

Periodic Table the table showing all the **elements**

physical **properties** concerning changes that do not involve the formation of a new substance

product a substance that is made during a **chemical change**

properties the characteristics of a substance

reactants substances that react together during a **chemical change**

sodium a silvery metallic **element** that explodes on contact with water

sulphur a solid, yellow, non-metallic **element**

word equation a way of recording a **chemical change**

Unit F Compounds and mixtures

Key word list

boiling point
evaporates
filtered
impurities
melting point

Unit F Compounds and mixtures

Glossary

boiling point the temperature at which a pure substance changes from a liquid to a gas (or a gas to a liquid)

evaporates changes from a liquid to a gas

filtered solid bits are separated from a mixture

impurities unwanted parts of a mixture

melting point the temperature at which a pure substance changes from a solid to a liquid (or a liquid to a solid)
