Types of Cells

Cell Bingo

It's time to play *Cell Bingo*!

Teacher Instructions:
Print out the following question cards including the correct responses. These will be the questions you ask the students.

Note: for some questions, there are multiple correct answers.

Distribute the printed bingo cards to the students. If you would like to re-use the cards, have the students use counters rather than marking them in pen.

Students can work in pairs, or small groups of three or four. Students may mark off as many correct responses as their bingo card contains.

The first student/group to mark off five in a row (horizontal, vertical or diagonal) calls out 'Bingo!' and has won the game.

Note: there is a free space in the centre. This is considered automatically filled.

B	I	N	G	O
AMOEBA	BLOOM	CYTOPLASM	SEXUAL REPRODUCTION	PLANTS
PROKARYOTE	CONTROL CELL FUNCTION	NUCLEOID	BINARY FISSION	MUSCLES
XYLEM	CELL	**FREE SPACE**	VACUOLES	ORGANS
CYTOSOL	FUNGI	YEAST	CELL WALL	REPRODUCE QUICKER
PHLOEM	ARCHAE	RIBOSOMES	CHLOROPLASTS	GROW FASTER

Types of Cells

Cell Bingo

	Question	Correct Response
1.	Which type of cell was the first to appear on the planet?	prokaryote
2.	Generally larger in size	eukaryote
3.	Prokaryotes never contain more than one	cell
4.	A type of asexual reproduction producing offspring clones	binary fission
5.	The larger surface to volume ratio of prokaryotes means they can	grow faster reproduce quicker
6.	A major role of DNA is to	control cell function
7.	An example of a unicellular eukaryote	amoeba paramecium yeast
8.	In eukaryotes, DNA is organised into	chromosomes
9.	The region in which DNA is found in prokaryote cells	nucleoid
10.	Found in both eukaryotes and prokaryotes	ribosomes DNA cell membranes cytoplasm cytosol
11.	Examples of multicellular eukaryotes	animals plants protozoa fungi
12.	Examples of prokaryotes	bacteria archae
13.	Name of the barrier between the external and internal environments, and made up of phospholipids and proteins	cell membrane
14.	Type of reproduction that involves combining genetic material from two parents	sexual reproduction
15.	Made of cellulose and only found in plants	cell wall
16.	Enable plants to photosynthesise	chloroplasts
17.	A place to store nutrients and water	vacuoles
18.	A type of tissue made up of specialised cells and found in animals	nerves muscles blood
19.	A type of tissue made up of specialised cells and found in plants	phloem xylem
20.	A collection of different types of tissues that, together, carry out a specific function	organs
