# Research Tasks

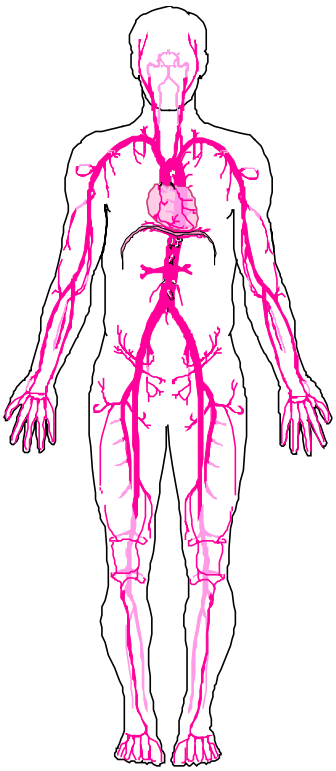

# Circulatory System

The circulatory system carries oxygen and nutrients to our cells. It also carries waste to the organs that are responsible for excretion. The blood's white cells help fight and protect our bodies against disease.

**Labels**

Heart
(Lungs)
Aorta
Superior vena cava
Inferior vena cava
Pulmonary artery
Pulmonary vein
Upper body
Lower body
Arteries
Veins
Capillaries

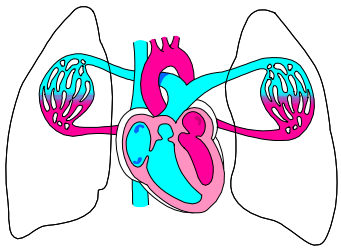

**Key Words**

Double circulation
Contract
Relax
High pressure
Low pressure
Oxygenated
Deoxygenated
Portal circulation
Blood pressure
Arteries
Composition
Red blood cells
White blood cells
Platelets
Plasma
Bronchitis
Emphysema
Veins

**Research Ideas**

- Why does the blood pass through the heart twice?
- What substances are carried by the blood, and where to?
- What are the similarities and differences between arteries and veins?
- What cells are found in the blood?
- What are the symptoms of high blood pressure?

**Advanced Research**

- What is portal circulation?
- Which people are at increased risk of high blood pressure?
- Find out about bronchitis and emphysema.
- What are the functions of the different types of blood cell?

**Presentation Ideas**

Design a wall display with diagrams and facts. Make sure your titles are big and bold, and that your work is as neat as possible.

Give a talk to your class. Prepare some diagrams (maybe on overheads) to help illustrate your presentation.

**Internet Search Terms**
(we recommend "google.com")

- "circulatory system" + work
- "high blood pressure"
- "circulatory system" + composition
- blood + composition
