Research Tasks

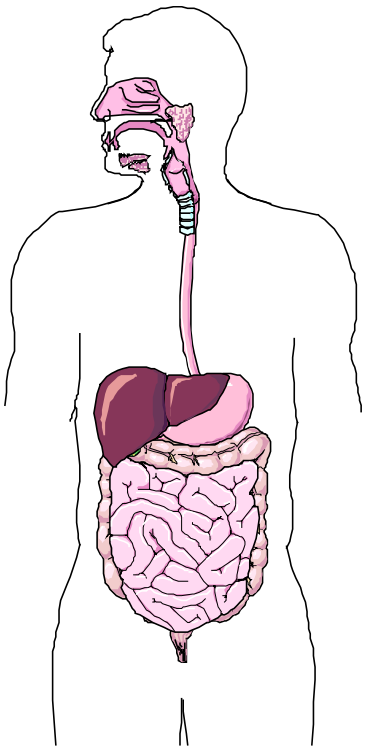

Digestive System

The digestive physically and chemically breaks down food so that it can be absorbed into our bloodstream. Any food that does not get absorbed is excreted as faeces.

Labels

Mouth
Liver
Stomach
Colon
Anus
Gall bladder
Salivary glands
Oesophagus
Large intestine
Small intestine
Alimentary canal

Key Words

Saliva
Digestion
Bile
Gall bladder
Emulsify
Physical processes
Chemical processes
Faeces
Cholera
Absorption
Bowel
Ulcer

Research Ideas

- What is the function of saliva?
- How long does it take food to be digested?
- Which organ produces bile, and what is its function?
- Digestion of food is both a physical and chemical process. Name two examples of each.
- How does digested food pass into our blood?

Advanced Research

- How long is the alimentary canal?
- What is cholera? Describe its effects on the body.
- Describe the treatment for 'twisted bowel'.
- Outline the causes and treatment of ulcers in the digestive system.

Presentation Ideas

Design a wall display with diagrams and facts. Make sure your titles are big and bold, and that your work is as neat as possible.

Give a talk to your class. Prepare some diagrams (maybe on overheads) to help illustrate your presentation.

Internet Search Terms
(we recommend "google.com")

- "food takes" + hours + digested
- digestion + "salivary amylase"
- food + absorption
- "digestive system"
- bile + function + production
