Levels of Biological Organization
Graphic Organizer

		Level of Organization	Description	Example 1	Example 2
Population Level	**Living Components**	biosphere			
		ecosystem			
		community			
		population			
Organismal Level		organism			
		organ system			
		organ			
		tissue			
Cellular Level		cell			
	Nonliving Components	organelle			
		molecule			
		atom			

Levels of Biological Organization
Graphic Organizer

Directions: For each level of biological organization:

1. match the description with the appropriate level
2. match the items in the Example 1 and Example 2 column with the appropriate level

Description of Organization Level	Example 1	Example 2
▪ a group of atoms that are chemically bonded together ▪ The zone of life on planet Earth. The sum of all of the ecosystems on Earth. ▪ a group of organs joined as a unit to perform a function ▪ The basic unit of life. ▪ the interacting, living populations that live in the same area ▪ a group of organisms of the same species, living in the same area ▪ a specialized part within a cell ▪ a group of specialized cells that perform a similar function ▪ a community of living organisms, and their non-living parts of their environment (energy, soil, air) ▪ a group of tissues joined as a unit to perform a function ▪ a distinct living thing ▪ The building blocks of all matter.	▪ a nerve cell ▪ a protein that lets nerve cells send impulses ▪ a wolf ▪ all of the ecosystems on Planet earth ▪ all of the wolves in Yellowstone ▪ the brain, the nerves, and sensory organs (skin, eyes, ears) ▪ the brain ▪ oxygen ▪ the nerve cells on the outer layer of the brain ▪ the nucleus of a nerve cell ▪ the wolves, all the other animals, the plants of Yellowstone Park ▪ the Yellowstone community, plus the energy, water, air, soil, etc.	▪ a cell in a leaf doing photosynthesis ▪ a redwood tree ▪ chlorophyll ▪ chloroplast ▪ leaf ▪ Planet Earth ▪ roots, stem, and veins in leaves the deliver water to leaf cells ▪ the cells on top of a leaf that secrete wax to prevent water loss ▪ the community of organisms in redwood national park, plus the energy flowing into the park, the air, water, soil, etc. ▪ the redwood forest, including all the plants, animals, and other organisms ▪ carbon ▪ the redwood trees in Redwood National Park
