Cells and Their Organelles

Plant and Animal Cells Venn Diagram

Cells that make up animals and plants are called eukaryotic cells. They have some organelles in common, but there are other organelles that are not common to both.

Place the following organelles into the Venn diagram for animal and plant cells:

cell membrane	cell walls	chloroplasts	cytoplasm
Golgi complex	lysosomes	mitochondria	nucleus
ribosomes	rough and smooth endoplasmic reticulum	small vacuoles	very large vacuoles
