Parachute Investigation and Technology Task

Your task is to design, create and evaluate your very own parachute.

When deciding on your materials and your design, think about the following:

- What materials could you use to make your parachute stay in the air as long as possible?
- What is going to be the best shape to use for your parachute?
- What are you going to use to attach the parachute to your weight?
- What are you going to use to stick your parachute together?

Materials that you could use: paper, plastic sleeve, string, fishing wire, tissue paper, sticky tape, glue, paper towels, plastic cups, foam cups, weights (such as washers).

Draw a picture of your design and label the different parts of the parachute, including the materials you have decided to use.

Name: _____ Date: _____

My Parachute Evaluation

Test your parachute outside. Find somewhere safe and high where you can let your parachute go. Evaluate the performance of your parachute.

What material did you use for the main part of your parachute?

_____

Was this the best material to use? Why?

_____

_____

What worked well in your parachute design?

_____

_____

_____

What did not work well in your parachute design?

_____

_____

_____

What would you do to make your design better?

_____

_____

_____
