Literacy support worksheet

1.9 Scientific reports communicate findings

Pages 22–23

Reporting

1 Trying to remember the eight parts of a scientific report can be a challenge at first.

One way to remember the order is to create a mnemonic (using the first letter of each word to create new words to form a sentence).

For example, '*Tiny Ants Healed Moths Meanwhile Rats Drew Cats'*, where 'tiny' is for 'title', 'ants' is for 'aim', and so on.

Write your own mnemonic next to the eights parts of a scientific report listed below:

a Title: _____

b Aim: _____

c Hypothesis: _____

d Materials: _____

e Method: _____

f Results: _____

g Discussion: _____

h Conclusion: _____

2 What are two different ways of writing the method?

_____

_____

_____

_____

WORD DETECTIVE

3 Match-a-word
Draw a line from the word to its meaning

Results	Talking about what was found, problems faced and possible improvements
Hypothesis	Your prediction about what will happen in the experiment
Scientific language	States whether the goal (aim) was reached or not
Conclusion	Represented in a table or graph
Method	Your prediction about the result
Aim	The write-up of the steps you did
Report	Language used when writing a scientific report
Discussion	The writing up of an experiment
