Science equipment

Cut out the name of science equipment, the definition of their use, and the images of the equipment below. Match them together then glue them into you notebook.

test tube **beaker** **measuring cylinder**

filter funnel **bench mat** **Bunsen burner**

tripod **spatula** **evaporating basin**

retort stand **clamp/boss head** **gauze (wire) mat**

used to measure volumes of liquids	burn gas to heat substances	used to evaporate liquid quickly
a mat the supports a beaker being heater over a Bunsen burner	used to hold other pieces of equipment where it is unsafe to use your hand	used for pouring liquids into narrow containers, or for filtering solid particles out of liquids
use to support a clamp and allow it to have adjustable height	a stand that support a gauze mat over a Bunsen burner	used for picking up solids and putting them into containers
used to holder larger amount of chemicals, or for heating liquids	placed under equipment to protect the bench from any damage	used for holding small amounts of chemicals
