Cell Organelles

Nucleolus	Animal cell	Vacuole	eukaryote	Cell wall
Cell membrane	Rough Endoplasmic Reticulum	Bacteria	Cytoskeleton	Golgi Bodies
Chlorophyll	cytoplasm	**Free Space!**	Centrioles	Organelle
Prokaryote	cell wall	Multicelled organism	Single cell organism	Smooth Endoplasmic Reticulum
Nucleus	Mitochondria	Chloroplasts	DNA	Ribosomes

Cell Organelles

Single cell organism	Nucleolus	Prokaryote	Centrioles	Bacteria
Rough Endoplasmic Reticulum	eukaryote	Vacuole	Multicelled organism	Cell wall
Cell membrane	Chloroplasts	**Free Space!**	Animal cell	Chlorophyll
Golgi Bodies	Cytoskeleton	cytoplasm	cell wall	Smooth Endoplasmic Reticulum
Organelle	Ribosomes	Mitochondria	DNA	Nucleus

Cell Organelles

Cell membrane	Multicelled organism	cytoplasm	eukaryote	cell wall
Smooth Endoplasmic Reticulum	Cell wall	Cytoskeleton	Vacuole	Rough Endoplasmic Reticulum
Chloroplasts	Nucleus	**Free Space!**	Bacteria	Mitochondria
DNA	Organelle	Animal cell	Nucleolus	Prokaryote
Single cell organism	Ribosomes	Chlorophyll	Centrioles	Golgi Bodies

Cell Organelles

Cytoskeleton	Smooth Endoplasmic Reticulum	Mitochondria	Organelle	DNA
Nucleus	Centrioles	Chloroplasts	Chlorophyll	Multicelled organism
Cell membrane	Vacuole	**Free Space!**	Ribosomes	Animal cell
Nucleolus	Cell wall	Single cell organism	Prokaryote	eukaryote
cytoplasm	Golgi Bodies	Bacteria	Rough Endoplasmic Reticulum	cell wall

Cell Organelles

Rough Endoplasmic Reticulum	Golgi Bodies	Bacteria	Smooth Endoplasmic Reticulum	Organelle
Chlorophyll	Prokaryote	Nucleus	Ribosomes	Cell wall
Single cell organism	Cytoskeleton	**Free Space!**	Multicelled organism	Centrioles
eukaryote	cytoplasm	Nucleolus	cell wall	DNA
Mitochondria	Animal cell	Cell membrane	Chloroplasts	Vacuole

Cell Organelles

Multicelled organism	Chloroplasts	Single cell organism	Cell membrane	cell wall
Rough Endoplasmic Reticulum	Cytoskeleton	Chlorophyll	Cell wall	Mitochondria
Bacteria	cytoplasm	**Free Space!**	Animal cell	Prokaryote
Nucleus	Vacuole	Smooth Endoplasmic Reticulum	DNA	Ribosomes
Organelle	eukaryote	Golgi Bodies	Centrioles	Nucleolus

Cell Organelles

Rough Endoplasmic Reticulum	Vacuole	Smooth Endoplasmic Reticulum	cytoplasm	Animal cell
Nucleus	Bacteria	Cell wall	Chlorophyll	Golgi Bodies
DNA	Nucleolus	**Free Space!**	Cytoskeleton	Multicelled organism
Centrioles	eukaryote	cell wall	Cell membrane	Mitochondria
Single cell organism	Prokaryote	Organelle	Chloroplasts	Ribosomes

Cell Organelles

Chlorophyll	eukaryote	Golgi Bodies	DNA	Cell wall
Rough Endoplasmic Reticulum	Bacteria	Cytoskeleton	Centrioles	Single cell organism
Organelle	Multicelled organism	**Free Space!**	Mitochondria	Animal cell
cell wall	Prokaryote	Cell membrane	Vacuole	Chloroplasts
cytoplasm	Nucleolus	Nucleus	Ribosomes	Smooth Endoplasmic Reticulum

Cell Organelles

eukaryote	Chlorophyll	Mitochondria	cell wall	Cell membrane
cytoplasm	Nucleus	Centrioles	Ribosomes	Golgi Bodies
Organelle	Chloroplasts	**Free Space!**	Cytoskeleton	Prokaryote
Animal cell	Vacuole	Single cell organism	Multicelled organism	Cell wall
Smooth Endoplasmic Reticulum	DNA	Rough Endoplasmic Reticulum	Bacteria	Nucleolus

Cell Organelles

Smooth Endoplasmic Reticulum	Chloroplasts	Golgi Bodies	Multicelled organism	cytoplasm
DNA	Cell wall	cell wall	Prokaryote	Nucleolus
Chlorophyll	Animal cell	**Free Space!**	Cell membrane	Ribosomes
Single cell organism	Rough Endoplasmic Reticulum	Organelle	Bacteria	Nucleus
Centrioles	eukaryote	Vacuole	Mitochondria	Cytoskeleton

Bingo Call List

1. cytoplasm - The jelly-like fluid that fills all cells
2. Smooth Endoplasmic Reticulum - Manufactures, lipids, hormones, steroids and carbohydrates.
3. Bacteria - is a prokaryote cell
4. Animal cell - is a eukaryote cell
5. eukaryote - cells that contain membrane-bound organelles
6. Vacuole - Organelle used for storage of water in plant cells and storage of food in animal cells
7. cell wall - chloroplast and large vacuole organelles, These organelles are found in plant cells.
8. Mitochondria - Takes in nutrients, breaks them down, and creates energy rich molecules for the cell. This process is called cellular respiration.
9. Centrioles - Cylindrical structures that help organise the assembly of the microtubules during cell division
10. DNA - What is found in the nucleus of a cell
11. Chlorophyll - the green pigment that traps the energy of sunlight for use in photosynthesis
12. Organelle - This is a word for all the small bodies in the cell that each have a special function
13. Single cell organism - carries out all the life processes in one cell
14. Multicelled organism - has different cells to perform different functions
15. Prokaryote - a cell that does not contain a nucleus or membrane bound organelles
16. Chloroplasts - Contain chlorophyll and in which photosynthesis takes place.
17. Cell wall - Main role is to give rigidity, strength and protection against mechanical stress.
18. Nucleus - Controls chemical reactions in the cell and stores the genetic information needed when the cell divides.
19. Cell membrane - Semi permeable structure that surrounds the cytoplasm of the cell
20. Rough Endoplasmic Reticulum - Manufactures and transports proteins destined for membranes and secretion,
21. Nucleolus - a small round body of protein in a cell nucleus; they contain RNAand are involved in protein synthesis
22. Ribosomes - Takes individual amino acids of the correct kind and link them in a chain in the right order, based on the sequence of the mRNA.
23. Golgi Bodies - Modify proteins made by the ribosomes.
24. Cytoskeleton - one function of this organelle is to provide a structural framework that gives the cell its shape.
