air resistance (drag)	effect of mass on strength of gravity
balanced forces	force
buoyancy	formula triangle (mass, weight & gravity)
contact forces	friction
effect of distance on strength of gravity	gravity

positive correlation - as one increases, the other increases	A type of friction that tries to slow things down that are moving through air.
A push or a pull. Measured in Newtons (N).	When two forces are the same strength, but working in opposite directions.
W=Mxg	The ability of a fluid to exert an upward force on an object.
A force that tries to slow things down when two things rub against each other.	A force that needs to touch an object before it can affect it.
The force of attraction between any two objects.	negative correlation - as one increases, the other decreases

like magnetic poles (S-S and N-N)	non-contact forces
lubrication	resultant force
magnetic field	static electricity
magnetism	streamlining
mass	strength of gravity on Earth

A force that can affect something from a distance.	Repel each other.
The overall force acting on an object when two or more forces are unbalanced.	Adding a substance to something in order to reduce friction.
A build up of electric charge on an object generally produced by friction.	The area of magnetic force around a magnet.
The science of shaping objects so they allow the easy flow of fluids/gases around them to reduce drag.	Force of attraction or repulsion that exists between the like or unlike poles of a magnet.
9.8N (~10N)	The amount of matter that something is made of. Measured in grams (g).

surface tension	upthrust
unbalanced forces	useful friction
units of force	water resistance
unlike magnetic poles (S-N)	ways to reduce friction
unuseful friction	weight

A force that pushes thing up.	Force between particles in a fluid that can prevent the surface of the fluid from being broken.
Friction that helps something move.	When two forces working in opposite directions are not the same strength.
A type of friction that tries to slow things down that are moving through water.	Newtons (N)
use lubricants, make surfaces smoother, reduce mass or surface area	Attract each other.
The amount of force with which gravity pulls something towards the Earth. Measured in newtons (N).	Friction that does not help something move making it move either too fast or too slow on a surface.
