	**Nerve cell (neurone)**	**Connect sensors to the brain (animal)**	**Long length for transmitting signals over long distance**
	**Palisade cell**	**Leaf (plant)**	**Transparent, regular shaped cells with chloroplasts**
	**Muscle cell**	**In the muscles (animal)**	**Can stretch to allow lengthening of muscles**

	**Root hair cell**	**Plant root (plant)**	**Long and thin to increase surface area, take water into up into plant cells**
	**Red blood cell**	**Blood (animal)**	**Large surface area for absorbing oxygen**
	**Ciliated Epithelial cell**	**Lines cavities e.g. airways (animal)**	**Has tiny hairs to help move liquids**

	**Sperm cell**	**Testes (animal)**	**Tail which allows cell to swim**
	**Egg cell**	**Ovary (animals and plants)**	**Contains large food store and genetic material to grow and develop**
	**Xylem cell**	**Plant stem (plant)**	**Hollow to carry water**

	**Pollen cell**	**Anther (plant)**	**Small and light to be easily transferred to the egg cell in the plant**
