HEART RATE AND EXERCISE

A student was running on a running machine and his pulse rate was measured every minute. The results are recorded in the table below.

TIME (minutes)	PULSE RATE (Beats per minute)
0	60
1	80
2	105
3	125
4	
5	140
6	135
7	136

Draw a graph of these results and the answer the following questions.

1. How many minutes after starting did the person's pulse rate reach a maximum?

2. What was this maximum?

3. What is the change in pulse rate from rest after running for 6 mins?

4. The result at 4 mins was not recorded. Use your graph to predict what this would have been.

5. What do you expect will happen to his pulse rate when he stops exercising?

6. Explain why a person's pulse rate increases with exercise.
