YEAR 7 FORCES

MUST (C)	Check	Teacher Initial	SHOULD (B)	Check	Teacher Initial	COULD (A)	Check	Teacher Initial
Draws diagrams which show forces on objects and predicts how unbalanced forces will affect an object's motion.			**Draws diagrams which show labelled forces on objects and predicts how unbalanced forces will affect an object's motion.**			**Draws diagrams which show forces of scaled length on objects and predicts in detail how unbalanced forces will affect an object's motion.**		
Draw an example of push or pull and verbally label			Explain how to measure force and state the unit of force			Explain how to measure force and state the unit of force		
Identify a push and a pull								
Measure a simple force using Newton Metre			Draw diagrams representing different forces			Explain what happens when forces are added together		
Identify force arrows on a diagram			Draw diagrams representing different forces			Compare forces using arrows on the force diagrams		
Give three examples of friction			Describe that friction is a contact force and what friction does			Explain in detail the beneficial and unwanted effects of friction Explain how to reduce friction		
Give an example of electrostatic and magnetic forces			Describe what electrostatic force is			Explain what causes electrostatic forces		
Recognise differences between contact and non-contact forces, attraction and repulsion			Explain with the help of examples the difference between a contact and a non-contact force			Explain that electrostatic and magnetic forces are non- contact		
Identify common situations where forces are balanced and /or unbalanced			Describe what happens to objects when forces are balanced and /or unbalanced			Explain in detail what happens to objects when forces are balanced and unbalanced		
Define the terms force, gravity, mass, weight, friction etc.						Explain how compasses work and the flipping of the Earth's magnetic poles
