Rock Cycle

Match the two halves of the sentences:

1. Magma from deep within the Earth rises to the surface, and cools to become igneous	
2. These igneous rocks are weathered and eroded to form sediments, which form sedimentary rocks.	
3. As layers of sedimentary rocks build up, the bottom layers sink deeper and deeper into the Earth's crust, where the temperature and pressure are greater.	
4. When this happens they can be changed into metamorphic rocks.	
5. If the temperature is high enough, they may melt to produce magma again.	
6. They may also be uplifted by huge Earth forces pushing the rocks upwards to form mountains.	
7. The Earth's surface is constantly being worn down and uplifted by mountain-building forces.	
8. As this happens the rock are changing from one form to another. The whole process is called the **rock cycle.**
