Cut out each of the boxes below.
Place the headings (metals and non metals) at the top of your page
Underneath each heading glue the descriptions that belong to each

Metals	**Non-metals**	Poor conductors Act as insulators	Good conductors of electricity
Good conductors of heat	Poor conductors of heat Act as insulators	Make a clear ringing sound when struck *Sonorous*	Produce a dull sound when struck
Shiny in appearance *Lustrous*	Dull in appearance	Easy to bend *Malleable*	Tend to shatter when hit hard *Brittle*
Most are solids	Most are gases, some are solids	High density	Low density
Can be drawn into a wire *Ductile*	Can not be drawn into a wire	Found on the left side and middle of the periodic table	Found on the right side of the periodic table

Each of the following is either a metal or a non metal

At the top of your page write two headings - Metals and Non metals

Cut out each of the boxes, read the descriptions carefully and place them under one of the headings.

Substance A A basic element of life Conducts electricity in one form Very high melting point (3150 °C)	**Substance B** Used to make bleaching agents Yellow/green gas at 20 °C Melting point –100 °C
Substance C Used in the production of alloys Highly toxic Density (11.34 g/cm^3) is half that of gold	**Substance D** Essential element in our diet Important role in the circulatory system Solid at 20 °C, and ductile
Substance E Key substance in the production of fertilisers and explosives Density of 0.88 g/cm^3 (measured at –200 °C)	**Substance F** Melting point of 1800 °C (similar to cerium, a soft grey metal element) Substance was used once as currency
Substance G A liquid at 20 °C Density similar to curium, a radioactive metal Conducts electricity well	**Substance H** Colourless gas at 20 °C A waste product of respiration
