For each item below, specify the independent and dependent variables, as well as constants.

1. A study was done to find if different tire treads affect the braking distance of a car

   I:
   D:
   C:

2. The time it takes to run a kilometre depends on the person's running speed.

   I:
   D:
   C:

3. The height of the bean plants depends on the amount of water they receive.

   I:
   D:
   C:

4. The higher the temperature of the air in the oven, the faster the cake will bake

   I:
   D:
   C:

5. Lemon trees receiving the most water produced the most lemons

   I:
   D:
   C:

6. An investigation found that more bushels of potatoes were produced when the soil was fertilized more.

   I:
   D:
   C:

7. Students measured the temperature of the water at different depths in Lake Skywalker and found that the temperature varied.

I:
D:
C:

8. The amount of pollution produced by cars was measured for cars using gasoline containing different amounts of lead.

   I:
   D:
   C:

9. Four group of rats are first massed and then fed identical diets except for the amount of vitamin A they received. Each group gets a different amount. After 3 weeks on the diet, the rats' masses are measured again to see if there has been a discrete great.

   I:
   D:
   C:

10. A student wanted to test how the mass of a paper airplane affected the distance it would fly. Paper clips were added before each test flight. As each paper clip was added, the plane was tested to determine how far it would fly.

    I:
    D:
    C:

11. Two groups of students were tested to compare their speed working math problems. Each group was given the same problems. One group used calculators and the other group without calculators.

    I:
    D:
    C:

12. An experiment was performed to determine how the amount of coffee grounds could affect the taste of coffee. The same kind of coffee, the same percolator, the same amount and type of water, the same perking time, and the same electrical sources were used.

    I:

D:
C:
