Gravity Experiment!!

Task 1: <u>Dropping things of different weight</u>

1. Take a piece of paper in one hand and a block of wood in the other.
    a. Which is heavier?
    b. Which do you think will fall faster and why?

2. Roll the piece of paper up into tight ball and drop the two items from the same height at the same time.
    a. Which landed on the ground first?
    b. Why?

Task 2: <u>Dropping things of the same weight but different size</u>

1. Using the ball of paper from the first task and grab a new piece of paper leaving it flat.
    a. Do you think they will fall at the same speed?
    b. Drop them from the same height at the same time. What happened this time?

    c. Why?

Task 3: <u>Dropping things on different parts of the Earth.</u>

1.

Draw a person on the top, bottom, left and right of Earth and show how gravity would affect them in these different positions.

Task 4: Your weight on different planets

Body	Gravity	Your Weight
Earth	1	
Moon	.16	
Mercury	.37	
Venus	.86	
Mars	.38	
Jupiter	2.6	
Saturn	1.1	
Uranus	1	
Neptune	1.5
