The Cell – How it works

Questions to answer while viewing the video.

1. What is meant by “multi-cellular”? How are cells able to live side by side?

2. What is the name of the outside of the cell? What is special about it?

3. Name the liquid inside of the cell? Is it the same all through? What is in it?

4. Name as many of the organelles as you can? Which one is the most obvious?

5. What is the most obvious organelle’s role?

6. What materials have to enter the cell and what would you expect the cell to give out?

7. Where are the instructions stored for running the cell?

8. What do mitochondria do?

9. Where do the wastes come from inside the cell? What are they? How does the cell get rid of them?

10. What do cells eat?

11. Plant cells have a special organelle, what is it? What does it do? How does this make plant cells different from animal cells?

12. Why are plant cells more rigid?

13. What does a vacuole do? Are they different in plant cells and animal cells?

14. What are cells living on their own called?

15. Why are cells so small? What would happen if one grew too big?
