Energy-Efficient Design (p190-193)

Reducing energy consumption

1. Where does most of the energy we use come from?

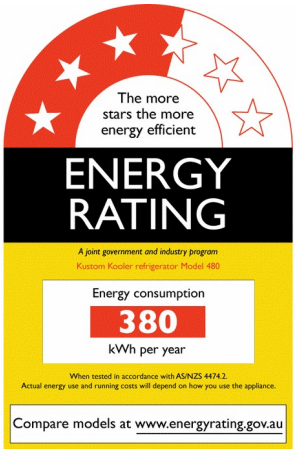

2. Name three non-renewable energy sources.

3. Name two problems associated with non-renewable energy sources.

4. Greenhouse gases increase the risk of global warming and climate change. List three effects of climate change on Australia.

5. Describe some ways a household can reduce their energy consumption.

Energy Rating Labels

1. What varies in household appliances?

2. How do more efficient appliances help a household?

3. What do the stars on an energy efficiency label show?

4. There is also a number on the labels. What does this tell the customer?

Efficient Housing

1. What are half the costs of a house used for?

2. Where does heat flow from?

3. What happens in winter?

4. What happens in summer?

5. What is the purpose of insulation?

6. What does the National House Energy Rating Scheme do?

7. List five ways the design of a house can be improved.
