What is a force?

A force is either a p _ _ _, a p _ _ _ or a twist.

☞ In each box, draw the picture described in the title. Underneath each picture, write what type of force it is: a push, a pull or a twist. On each picture, draw an arrow to show the direction of the force.

_____

Dog pulling on a lead

_____

Hand turning a door knob

_____

Boy kicking a ball

_____

Hand opening a draw

_____

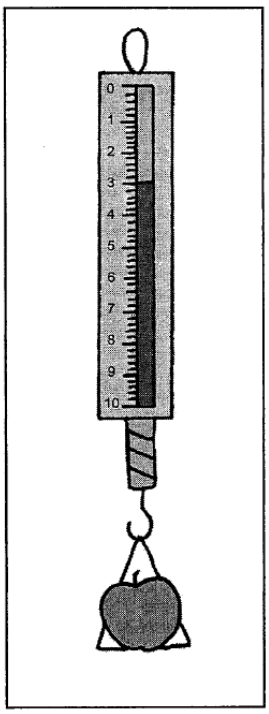

A screwdriver

_____

☞ On a separate piece of paper, draw two more pictures showing a push, two more showing a pull and two more showing a twist.

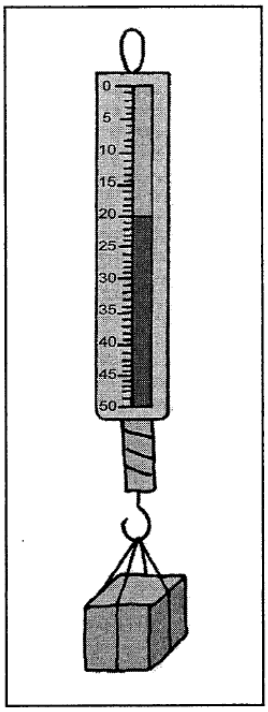

Measuring force

- Weight is the force we all know, it is what keeps us on the ground.
- Force is measured using a force meter (often called a Newton meter).
- Force is measured in units called Newtons (N).

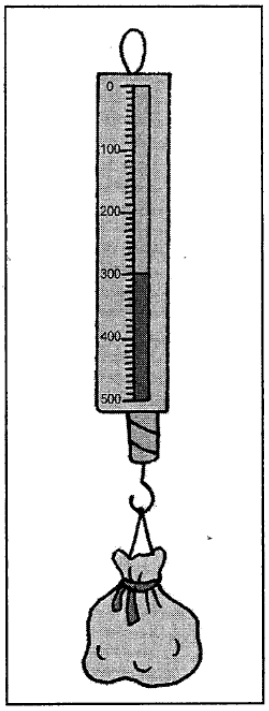

Apple

Weight = _____N

Brick

Weight = _____N

Sack

Weight = _____N

☞ Working with a partner, use a force meter with a suitable scale to find the weight of your pencil case, a book, a shoe and anything else that is easily available in your classroom. Record your results in the table below.

Item	Force (N)	Item	Force (N)

Balanced forces

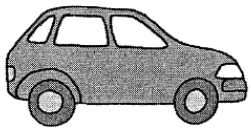

☞ Use the word bank to complete this sentence.

Word bank

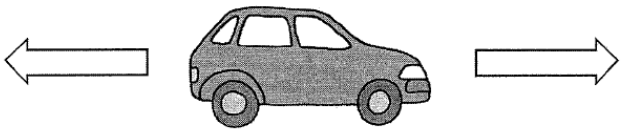

balanced same
pulling opposite

If the forces acting on an object are the s _ _ _ but are p _ _ _ _ _ _ in o _ _ _ _ _ _ _ directions, we say that the forces are b _ _ _ _ _ _ _.

☞ This car is just starting its journey and is accelerating. Draw arrows to show the forces acting on it.

☞ The car is now travelling at a steady speed of 30 kph. The forces acting on it are

☞ Use your knowledge of forces to explain what has happened here!

☞ Draw some pictures in your work book of a man with a parachute:

(a) leaving the plane
(b) descending through the air
(c) landing.

Write a sentence next to each picture to explain about the forces acting on the man and his parachute.

☞ Find the different forces in this picture of families playing in the park and list them in your work book.
