Name: _____

Measuring Energy

Energy is measured in Joules

There are 1000 joules in a kilojoule.

1000J = 1KJ

- To convert joules to kilojoules divide by 1000
- To convert kilojoules to joules multiply by 1000
- Remember, to divide by 1000, move the decimal place 3 spaces to the left.
- Remember, to multiply by 1000, move the decimal place 3 spaces to the right.
- Look at your answer. If you wanted to convert J to KJ the number should now be smaller. If you wanted to convert KJ to J the number should now be bigger.

Complete the following table:

Joules (J)	Kilojoules (KJ)
1000	1
2000	
500	
	2500
	750
4100	
	1375
1555	
	999
0.850
