Reflective foil on _____. Stops h_____ entering as radiant heat from the s_____.	Heading	Double glazing. Stops heat loss and gain by conduction through the w_____
Light coloured roof. This reflects _____ and helps keep the house _____ in summer. So less energy needs to be spent on a___-_____		Shade tree. This blocks some of the light hitting the house. So the house stays _____ in summer. Stops h_____ by radiation.
Insulation in roof c_____. Stops heat loss and g____ by c_____. So house is w_____ in winter and c_____ in summer		Solar heating. Uses r_____ energy from the s____ to heat water. So m_____ can be saved as less e_____ needs to be used to heat w_____
Use f_____ or __.__.__ lights as they are more efficient than traditional incandescent lights.		Light coloured house walls. This reflects _____ and helps keep the house _____ in summer. So less energy needs to be spent on a___-_____.
	Words to use. Dish washer, Sun, summer, cooler, air-conditioning, light, space, fluorescent, L.E.D. gain, conduction, heating, windows, warmer, cooler, lights, showers, cavity, conduction, warmer, cooler, radiant, money, energy, water. Heading = Energy Efficiency In the Home.	Behaviour. Turn off _____ when not in use. Have shorter _____. Fill _____ _____ before use.
