Sedimentary Rocky Road Activity

Aim: To produce a sedimentary rock using chocolate and other foods as sediments.

Equipment: Two bags of cooking chocolates, lolly snakes cut into pieces, milk arrowroot biscuits in pieces, marshmallows in pieces, choc chips, honey comb in small pieces.

Method: 1. Teacher melt chocolate in two separate bowls. Small bowl in a water bath.

2. Students build a small alfoil tray approximately 15cm x 15cm.
3. Place the alfoil tray in a metal cooking tray.
4. Place another flat piece of foil in the tray.
5. Teacher to place 3 tablespoons of choc in the foil tray.
6. Teacher to place a range of sediment samples on the second piece of foil.
7. Students place a range of the sediments into the chocolate.
8. Teacher to place more chocolate onto the sediments.
9. Place the chocolate into the freezer for 5 minutes to cool and solidify.
10. Remove from the fridge and cut into pieces to observe.
