Changing a solid to a liquid

You Need: Test tube, test tube holder, Bunsen burner, piece of candle wax.

Study the wax closely. Observe the colour. Rub it between your fingers to observe the feel of the wax.

Record your observations in the table below:

Solid Wax	Liquid Wax

Put the wax in the test-tube and heat it.
Observe closely as the wax begins to melts.

What happens when the wax is heated?

_____
_____
_____

Continue to heat the wax until it has all melted.
Record your observations in the table above.
Look at the surface of the wax and describe its shape.

_____

Wax changes from the _____state to the _____ state when it is heated.

How could you change the wax back to a solid?
