HEART RATE AND EXERCISE

A student was running on a running machine and his pulse rate was measured every minute. The results are recorded in the table below.

TIME (minutes)	PULSE RATE (Beats per minute)
0	60
1	80
2	105
3	125
4	
5	140
6	135
7	136

Draw a LINE graph of these results and then answer the following questions.

1. What was the highest heart rate? _____

2. After how many minutes did the heart rate get to this highest rate? _____

3. After 6 minutes what is the heart rate? _____ How different is this from the resting (starting) heart rate?

   Rate at 6 minutes _____

   Starting rate at 0 minutes _____

   Difference _____

4. The result at 4 mins was not recorded. Use your graph to predict what this would have been. _____

5. What do you expect will happen to his pulse rate when he stops exercising? _____

6. Why does a person's pulse rate increase when they do exercise?
