Measurement

1. Look at the diagram below

a) What is the length of the cube?
b) What is the Volume of the cube ?

2. a) What are the values of the graduations (unmarked lines) in each of the following measuring cylinders?

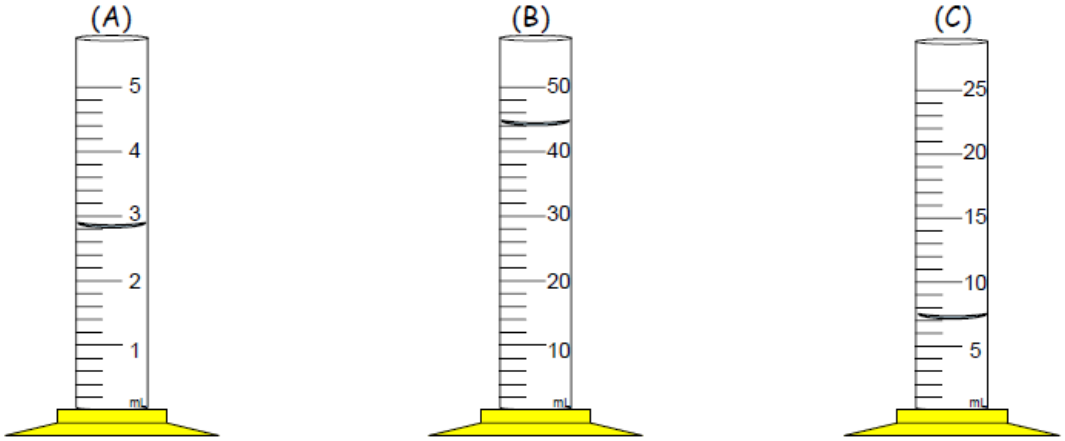

graduations = _____ graduations = _____ graduations = _____

b) Which of the measuring cylinders will provide the most accurate measurement for an object that has a volume of around 2mL? Explain your answer

3. What do you call the curved, upper surface of water that commonly appears when using a measuring cylinder?

4. What is the volume of the liquid in each of the measuring cylinders?

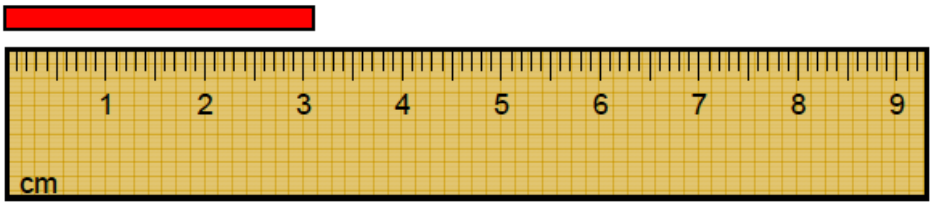

Volume = _____ Volume = _____ Volume = _____

5. a) Describe the difference between a mistake and an error

   b) Describe what is a parallax error

6. What is the appropriate unit for the following
   a) The height of a house
   b) Volume of a can of coke
   c) Weight of a cup of flour
   d) Time to run the 100m dash
   e) Length of your hand
   f) Age of a person
   g) Weight of a person
   h) Weight of a truck
   i) Length of a moose antlers
   j) The temperature of today

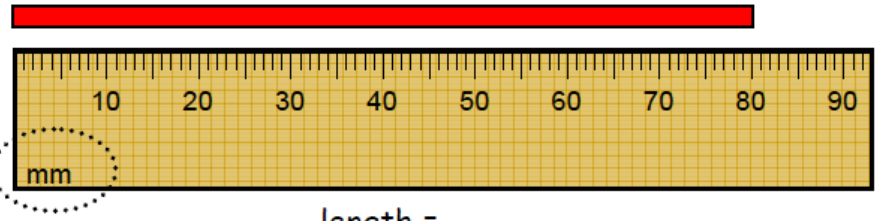

7. What is the length of the lines below?

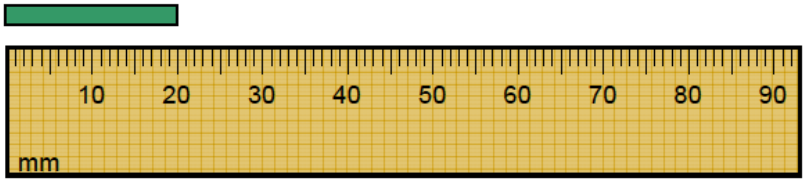

length = _____

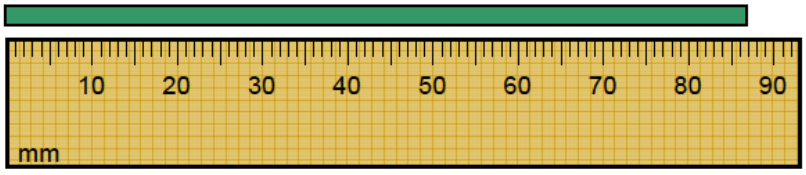

length = _____

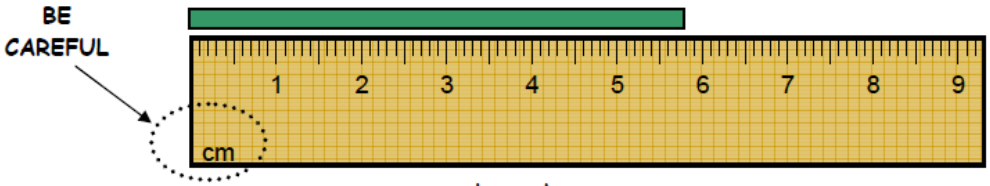

length = _____

length = _____

length = _____

length = _____
