A cure? eles-0070

1. What is the name of the Australian scientist who developed the cervical cancer vaccine and is now working on a skin cancer vaccine?

2. Name four organs in which squamous cells are found.

3. What is the epidermis?

4. Explain how squamous cell carcinoma (SCC) occurs.

5. In your own words, explain how vaccines work to destroy viruses.

6. (a) What is the most common cause of skin damage that leads to skin cancer?

   (b) In what ways are people exposed to this damage?

7. Are all people at equal risk of skin cancer? Explain your answer fully.

8. Most vaccines can help the immune system defend the body only against bacteria and viruses. If cancer vaccines do not act against bacteria or viruses, how is it possible to develop a vaccine that protects against SCC?

9. What is the name of the virus associated with the increased risk of skin cancer?
