Metals and Non-metals

1. Write a definition of the following terms
    a. Lustre

    b. Malleable

    c. Brittle

    d. Ductile

2. Complete the table below showing the properties of metals and non-metals.

	Metals	Non-metals
State at Room Temperature		
Lustre		
Electrical Conductivity		
Heat Conductivity		
Malleability		
Ductility		
Melting Point		

3. What is a metalloid? List 4 examples of metalloids.

4. Which metal is a liquid at room temperature?

5. While all metals have similar characteristics, there are also differences between them. List three ways in which metals can differ from each other.

6. Graphite, a form of carbon, is an electrical conductor, like a metal. Explain why graphite isn't used in the electrical circuits of house wiring.
