W.S.83. **The seasons.** Name .....

It takes 365 days and 6 hours for the Earth to complete one orbit of the Sun. We make one year 365 days but every four years we need to add on an extra day to make up for the six extra hours. This is why a LEAP year has 366 days.
During a year in Britain the weather gradually changes from warm Summer to cold Winter and back again. The different SEASONS are caused by the tilt of the Earth on its axis. The diagram below shows how this happens.

Exercise - Study the diagram above and then try to complete the sentences below.

1) One complete circle around the Sun is called an _ _ _ _ _

2) It takes one _ _ _ _ for the Earth to orbit the Sun.

3) In _ _ _ _ _ _ the Sun is at its highest in the sky.

4) In _ _ _ _ _ _ the Sun is at its lowest in the sky.

5) In Summer the Northern Hemisphere is tilted _ _ _ _ _ _ _ the Sun.

6) Australia is in the _ _ _ _ _ _ _ _ Hemisphere so in December it is their _ _ _ _ _ _
