Student worksheet

6.1 All organisms are interdependent

Pages 102–103 and 198

Food chains and food webs

1 Use the diagram of the owl to construct a food chain. Under each organism in the food chain, write whether they are a consumer or producer.

The following observations were made while sitting by a billabong.

Nymphs, water beetles and fish were observed eating algae and water plants. Dragonflies were seen consuming the water beetles and nymphs. A large black swan started feeding on the water plants, but also ate the nymphs and water beetles. A long-necked turtle also ate the water plants and water beetles. Then, a huge wedged-tailed eagle swooped down and plucked the turtle from the water and started to eat it.

2 Construct a food web to show the feeding relationships between the various organisms observed by the billabong.

a What were the producers found at the billabong?

b What were the first-order consumers found at the billabong?

c What were the top consumers found at the billabong?

d Write one food chain from the description of the billabong.

3 Could the Sun also be included in a food chain or food web?

EXTEND YOUR UNDERSTANDING

4 Research an example of a food web that does not start with the energy of the Sun.
