Name: Class:

Literacy support worksheet

2.5 The boiling points of liquids can be used to separate mixtures

Pages 38–39 and 180–181

Going off the boil

1 Imagine you accidentally put sugar into a friend's cup of tea. You decide to pour the cup of tea into a saucepan and boil it to separate the sugar from the tea.

a What method of separation are you using?

---

b What crystals would remain in the saucepan?

---

2 Draw a labelled diagram to show how this process of separation would work.

3 The table below shows the boiling points of common liquids. Use the data to create a column graph ranging from the lowest to the highest boiling point in the space provided.

LIQUID	BOILING POINT (°C)
Water	100
Alcohol	78
Petrol	95
Olive oil	300
Tar	300
Turpentine	160

4 The diagram below shows the equipment used for distillation in the science laboratory. Label the equipment described in the table.

EQUIPMENT	DESCRIPTION
Flask	A bottle made of glass with a round body and a narrow neck
Tripod stand	A three-legged stand to support an object and keep it steady
Stand	A square support to keep an object steady
Bunsen burner	A small gas burner used as a source of heat
Test tube	A thin glass tube used to hold small amounts of material

WORD DETECTIVE

5 Crossword
Read the clues below and place the correct answers in the crossword boxes:

Across

3 The change of state from a gas to a liquid
4 Uses evaporation and condensation to separate
6 Of the Sun
7 A change of state from liquid to gas
8 When two things have been made separate, they have gone through a _____.

Down

1 Evaporation, crystallisation and distillation are used to separate the solvent from the solute in a _____.
2 Used to describe the distillation of crude oil
3 Separating chemicals, often by colour
5 Any liquid that dissolves another substance(s)
8 A substance that dissolves in a liquid
