# Dasyurids vs kangaroos

**Genetic diversity** is a term used to describe the variety of genes within any species. Some animals such as kangaroos are all genetically very similar. **Dasyurids**, or carnivorous marsupials, have evolved from ancient species and are more genetically diverse. Numbats, quolls and the Tasmanian devil are all dasyurids. If one species of dasyurid becomes **extinct**, we lose a large genetic resource. Several species of dasyurids are **endangered** and the Tasmanian Tiger is already extinct.

☞ **1** Label each of these species as either dasyurid or kangaroo.

wallaby _____

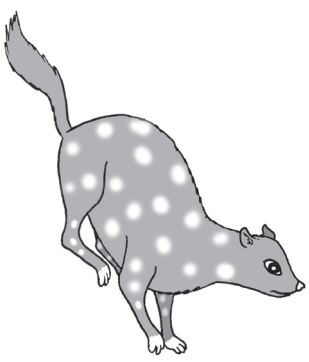

Tasmanian tiger _____

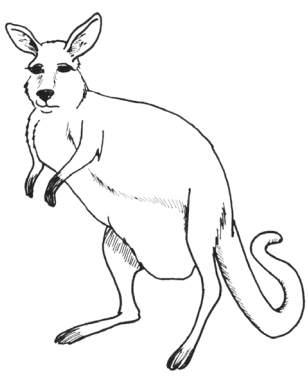

Tasmanian devil _____

red kangaroo _____

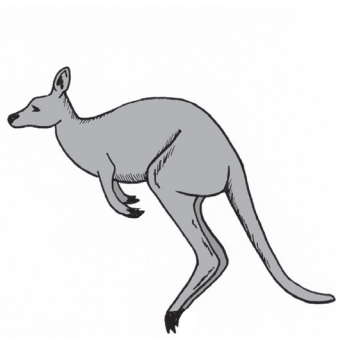

quoll _____

euro _____

numbat _____

grey kangaroo _____
