Drawing and making molecules

Molecules are particles that are made up of more than one atom. In a molecule of an **element**, the atoms are the same. In a molecule of a **compound**, the atoms are different.

☞ **1** Using a molecular kit and the periodic table, build the common molecules listed in the table below, then complete the table. When drawing the molecules, use the same colour as the atoms in the molecular kit.

Molecule name	Formula	Molecule diagram	Element or compound
oxygen	O_2		Element
carbon dioxide	CO_2		
ozone	O_3		
water	H_2O		
table salt	NaCl		

2 Next to each molecular compound, write down the name and number of each type of atom that is joined to make the molecule. The first one has been done for you.

a water (H_2O) 2 hydrogen atoms and 1 oxygen atom

b sulfur dioxide (SO_2) _____

c carbon monoxide (CO) _____

d hydrochloric acid (HCl) _____

e table salt (NaCl) _____
